

COMPLETE PORTFOLIO SETUP GUIDE

From GitHub Cloning to Live Nginx Server on CentOS

Step 1: Install Git on CentOS

```
sudo dnf install git -y
```

👉 This command installs Git on your CentOS system so you can download code repositories.

Step 2: Clone Your Portfolio Repository

```
cd ~
```

👉 This command takes you to your home directory.

```
git clone <YOUR_GITHUB_REPO_URL> Portfolio
```

👉 This command downloads your website files from GitHub into a folder named Portfolio.

Step 3: Move Portfolio Folder to Web Directory

```
sudo mkdir -p /var/www/html
```

👉 This command creates the standard web directory folder if it does not already exist.

```
sudo mv ~/Portfolio /var/www/html/
```

👉 This command moves your Portfolio folder into the main Linux web server location.

Step 4: Set Correct Permissions

```
sudo chown -R nginx:nginx /var/www/html/Portfolio
```

👉 This command changes folder ownership to nginx so the web server can access your files.

```
sudo chmod -R 755 /var/www/html/Portfolio
```

👉 This command grants read and execute permissions so visitors can view your website pages.

Step 5: Turn Off Default Nginx Welcome Page

```
sudo mv /etc/nginx/conf.d/default.conf /etc/nginx/conf.d/default.conf.disabled
```

👉 This command disables the default Nginx welcome page config file so it won't override your site.

Step 6: Create Your Website Config File

```
sudo nano /etc/nginx/conf.d/portfolio.conf
```

👉 This command opens a simple text editor to create custom settings for your portfolio.

Step 7: Add Website Settings

```
server {  
    listen 80 default_server;  
    listen [::]:80 default_server;  
    server_name _;  
  
    root /var/www/html/Portfolio;  
    index index.html;  
  
    location / {  
        try_files $uri $uri/ =404;  
    }  
}
```

👉 Press **Ctrl + O**, hit **Enter** to save, then press **Ctrl + X** to exit nano.

Step 8: Test Configuration for Errors

```
sudo nginx -t
```

👉 This command checks your config file to ensure there are no syntax or typing errors.

Step 9: Fix SELinux Security Context

```
sudo chcon -Rt httpd_sys_content_t /var/www/html/Portfolio
```

👉 This command tells CentOS security that this folder is safe for Nginx to serve over the web.

Step 10: Restart Nginx Web Server

```
sudo systemctl restart nginx
```

👉 This command reboots Nginx to apply all your new website settings.

Step 11: View Website in Windows Browser

👉 Open **http://localhost:8080** on Windows and press **Ctrl + F5** to hard-refresh!

Success!

Your GitHub Portfolio website is now running live on your CentOS Nginx VM.
